

### ANTI-PHISH.me Solution Overview

Combine the power of Computer Vision and AI to detect newly-created phishing attacks – IN REAL TIME.

**Addresses All  
Phishing Attacks**

**Total Anti-  
Phishing Defence**

**Simple Non-Proxy  
Integration**

#### ORGANISATION SECURITY

Prevent phishing attacks against your organisation by putting in place the most comprehensive Anti-Phishing solution in the market.

#### NEXT GENERATION ANTI-PHISHING & EMAIL SECURITY

Anti-Phish.me “looks” at emails and website and detects impersonation in real-time.

#### PHISHING CASES ON THE RISE

Phishing refers to using a fake website designed to look like a genuine one of a particular service to trick users into giving up their user name and log-in information.

Phishing instances have increased by almost 10 times since 2017. These were part of a rising number of cyberthreats in Singapore.

The Singapore Cyber Landscape 2017 report released by CSA illustrated the grim figures of 23,420 phishing links found, which is a staggering 832% increase from the year before.

As companies improve on their capabilities and ability to check and respond to threats, cyber-threat actors correspondingly change their approaches. In this ever-changing cyber landscape, how does an organization then defend against such attacks?

Anti-Phish.me provides an all rounded defence from the most sophisticated phishing attacks by combining Computer Vision, AI and Contextual Training.

#### HIGHLIGHTS

- Anti-Phish.me protects companies' employees from the most sophisticated phishing attacks by combining Computer Vision, AI and Contextual Training.
- This groundbreaking protection approach examines incoming emails, the links included as well as the landing pages to analyse their visual representation and detect impersonation, before it is opened by the intended recipient.
- The Visual Analysis Technology is equipped with the ability to detect new phishing attacks in real-time, providing an additional layer of protection.
- Fully automated phishing training and educational modules provide employees with highly relevant contextual training based on current real-world attack scenarios.
- Advantage conferred by using user friendly, transparent proxy deployment that requires minimum support.
